Licences: Full NSW Driver's Licence

PROFESSIONAL SUMMARY

Software Engineer and Master of IT (AI) graduate focusing on enterprise backend applications, relational databases, and secure software engineering practices. Proficient in designing, scaling, and maintaining highly scalable software products through Java programming, SQL, and REST APIs. Demonstrated capability of handling end-to-end software product life cycle from designing to troubleshooting, eliminating technical debts, and performing Test-Driven Development (TDD).

TECHNICAL SKILLS

Languages: Java, SQL, Python, C++, Dart, JavaScript
Backend & Databases: PostgreSQL, RESTful Web Services, ORM frameworks, FastAPI
Quality & Deployment: Test-Driven Development (TDD), CI/CD pipelines, Git, Secure Software Development
Frontend & Mobile: React, Flutter
AI & Data Engineering: LangChain, RAG, PyTorch, Pandas, NumPy

WORK EXPERIENCE

SOFTWARE DEVELOPER (CONTRACT) June 2024 – July 2026

Elements Bar & Grill Sydney, NSW

- Architected and sustained a comprehensive ERP system from scratch, replacing manual legacy processes with a secure, centralized platform for a multi-location restaurant chain.
- Designed RESTful web services and robust business logic to connect the front-end to a highly optimized SQL database, utilizing ORM to handle real-time inventory and vendor ordering.
- Removed technical debt and optimized database performance by analyzing slow queries, applying proper indexing, and refactoring backend code to ensure zero data loss during high-concurrency dinner rushes.
- Troubleshoot and debugged production issues independently, applying Test-Driven Development (TDD) principles to write unit tests that prevented regressions.
- Managed the complete software development lifecycle, including secure deployment via CI/CD pipelines and maintaining strict version control using Git.

SOFTWARE DEVELOPER (PART-TIME) May 2021 – June 2024

BinaryCraft Mirpur, Dhaka

It is a homegrown software development company providing software & IT solutions for financial technology, ecommerce, pharma, manufacturing, retail, etc. industries both locally & globally. [Visit Website.](#)

- Developed and maintained 8+ multiplatform mobile applications using Flutter and React.
- Collaborated with teams to design, develop, and deploy new features.
- Conducted thorough testing and debugging to optimise software performance and user experience

PROJECTS

Minima (ML Algorithms Visualiser) | Lead Developer | [LIVE DEMO](#)

Current

I am building an open-source, interactive curriculum for machine learning. Each lesson pairs readable MDX with client-side sandboxes so readers can manipulate data, hyperparameters, and geometry directly in the browser without opaque black boxes. [Github repository](#)

LandDrop | Lead Developer

May 2026

I built a lightweight, zero-configuration local network file-sharing and media streaming app. Features real-time syncing, HTTP video streaming, and a premium, TV-optimized UI. [Github repository](#)

Prism (RAG Visualiser) | Lead Developer | [LIVE DEMO](#)

Jan 2026

Architected an open-source web application to visualize Retrieval-Augmented Generation (RAG) processes. Engineered the user interface using React to decode complex LLM data flows, supported by a robust Python backend for mathematical processing. [Github repository](#)

StepWise | Lead Developer | [LIVE DEMO](#)

Nov 2025

Built a highly scalable student utility platform integrating a Flutter frontend with a robust PostgreSQL database via secure RESTful APIs. Designed the backend system architecture using an AWS API Gateway to securely route traffic, ensuring strict data access controls and high-performance database querying.

MedWay | Lead Developer

Mar 2021

Engineered a comprehensive medicine delivery application, managing the end-to-end software development lifecycle. Developed scalable front-end and back-end architectures to facilitate seamless public launch and user onboarding. [Github repository](#)

Helping Hand | Lead Developer

July 2020

Engineered a community-driven mobile application to facilitate local volunteer logistics during the COVID-19 pandemic. Architected a localized matching system to connect supply requests with geo-located volunteers, ensuring secure and efficient aid distribution. [Github repository](#)

EDUCATION

MASTER OF IT IN ARTIFICIAL INTELLIGENCE

Macquarie University – Sydney, Australia

Graduating July 2026

BACHELOR OF SCIENCE IN COMPUTER SCIENCE AND ENGINEERING

North South University – Dhaka, Bangladesh

Graduated 2023

PUBLICATION

Deep learning to aid prescription processing & inventory management for local pharmacies through smartphone application. International Journal of Supply Chain & Management (IJSCM), Vol. 10, No. 4, Aug 2021. Primary Author

PROFESSIONAL MEMBERSHIP

Member, Australian Computer Society (ACS)
